## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, 23 and 24, drawn to a receptor specific liposome and pharmaceutical compositions thereof, classified in class 424, subclass 1.21.
- II. Claims 11-22, drawn to a method of delivering a therapeutic gene to ocular cells, classified in class 435, subclass 458.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process for using the product can be practiced using another materially different product, such as the use of a viral vector.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Furthermore, these inventions require non-patent literature searches that are not co-extensive, hence a simultaneous search of each invention would be burdensome. As a result, restriction for examination purposes as indicated is proper.

Art Unit: 1636

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
